

DOCSTACK PORTAL

Enable Effective Collaboration with Customers and Partners

Docstack Portal is an enterprise web portal that allows organisations to rapidly deploy powerful corporate intranets, extranets and secure file sharing portal, enabling personalised interactions with customers, employees and partners.

It can integrate with existing enterprise content management platforms such as M-Files, SharePoint and OpenText providing a simplified and engaging user experience for file sharing, workflow assignments and social conversations inside and outside the organisation.

SUPPORTED PLATFORMS

- M-Files®
- Microsoft® SharePoint
- OpenText® ECM
- Microsoft® Azure

Easily Create Secure Web Portals

Create secure portals from within your ECM platform such as M-Files or OpenText, for publishing and receiving large files and confidential documents with a password protected link. Set expiry dates or delete links to remove access.

Improve Collaboration with Customers

Enable effective collaboration with employees, customers and partners using a single, modern and sleek single user interface, and allowing external users to participate in existing workflows and complete tasks & assignments.

Create Beautiful User Experiences

Create beautiful role-based user experiences irrespective of device, projecting a strong brand and providing social media features such as conversations, instant messaging, share calendars, announcement, wikis and blogs.

Full Audit Trail and Administrative Control

Full audit trails, built-in notifications and administrative controls allow you to keep track of user activities and access.

Integrate Securely with your Internal Systems

Integrate with a wide range of ECM platforms such as M-Files, OpenText and SharePoint as well as Authentication Providers such as MS Active Directory, MS Azure AD, Google, Facebook and OpenID.
